

PX-Edit 3.2

Files

PX-Edit installation files

Crucial installation files

- `PX-Edit.exe`
 - application: core parts
- `PX-Edit_32.paq`
 - application: code package
- `Dyalog140rt_unicode.dll`
 - the APL interpreter as a runtime dll
 - used by all executables
- `PX-Edit_main_32.ini`
 - system settings
 - `PX-Edit_main_32e_ini.txt` file contains all the settings commented in English

Other installation files

- PX-Edit_en.rtf laconic help file (in English)
- PC-Axis_en.rtf PC-Axis format description (- “ -)
- PX-Job.exe batch application
- XDF_32.ini CoSSI/XML settings (not compulsory)
- PX-Edit.bmp startup picture (splash screen)
- Zip.exe, Unzip.exe *Info-Zip* files for archive handling
- PX-Job_32.txt detailed PX-Job documentation
- PX-Edit_lng_en_32.ini English language text strings
- extra language files, etc.

At startup

- After the application loads itself:
 - `px-edit_main_32.ini` is parsed
 - e.g. location of the personal ini file
 - personal configuration file is parsed
 - if the 3.2 ini file is not found, PX-Edit tries to read the 3.1 ini file
 - some interface checking (px file existence, PX-Map, [Excel](#), environmental settings, ...)
 - language files are parsed (if found)
 - the user interface is created
 - check for another PX-Edit session
 - record the log-in information in the log file
 - remove the splash screen

Configuration files

Main settings: PX-Edit_main_32.ini

- Administrative/organisational settings
- Usually created once and seldom changed
 - if it is not found, PX-Edit will start with default settings
- Default settings for a new user
- Resides in the startup directory
- There may be several different PX-Edit installations and setups in the organisation
- The file PX-Edit_main_32e_ini.txt contains accurate descriptions of the available settings

Main settings: [Language]

`default_language=`

- the default language code for the new user
 - if this setting is not found, PX-Edit will use the defined system language
- the available languages depend on the available language files

`base_language_coding={0|1}` [*Settings/Base language coding*]

- determines how the language strings are converted
- the default value 1 converts all the strings based on the system language, otherwise (0) the main language of the table is used

Main settings: [Fonts]

default_font=**Arial**

txt_font=**Arial** [*Settings/Font*]

sys_font=**Arial** [*Settings/Font*]

- default, text and system fonts, respectively

default_size=**16** [*Settings/Font*]

- font size settings

htm_charset=

- default character set for html output (default: `utf-8`)

Main settings: [Files]

`most_recently_used=25`

- the number of file names stored in the personal ini file as default

`last_nn=`

`last_px_nn=`

`lastcsv_nn=`

`lasttxt_nn=`

`lastxls_nn=`

- the names of the recently used files are stored in the personal ini file

Main settings: [System] /1

- The System settings are meant for organisation wide usage, and they are thus **not** copied into the personal ini file

```
px_edit_url_fi=www.stat.fi/tup/pcaxis/  
lataus_tyokalut.html
```

```
px_edit_url_en=www.stat.fi/tup/pcaxis/  
lataus_tyokalut_en.html
```

```
px_edit_url_sv=www.stat.fi/tup/pcaxis/  
lataus_tyokalut_sv.html
```

```
pc_axis_url=www.scb.se/pc-axis
```

```
px_forum_url=http://groups.google.com/group/pcaxis
```

- the homepages for PX-Edit (in three languages), PC-Axis and the discussion forum

Main settings: [System] /2

`edit_cells={0|1}`

- the value 0 prevents the user from editing the data table values

`px-web_version={2003|2005|2007|2008|2013}`

- the PX-Web version being used
- possible values are 2003, 2005, 2007, 2008 and 2013
- this affects the format of the keywords *DESCRIPTION* and *TITLE*, too

`caption_description={0|1}`

- the table caption style being used
- possible values are 0 (*TITLE*) or 1 (*DESCRIPTION*)

Main settings: [System] /3

`ini_directory=`

- directory used for personal configuration files
- every PX-Edit user should have read and write access
- the file names in the form `username.ini` (otherwise `px-edit.ini`)

`ini_default=`

- the configuration file which replaces the user's corresponding personal settings

`log_directory=`

- directory logging user actions (also error log files will be placed here)
- the PX-Edit user must have read and write access
- log files will be in the form `px-edit_YYYY-mm.log`

Main settings: [System] /4

`version_warning_file=`

- the file name or web link shown the first time a user starts a new version
- may be a text file (.txt), a RichText file (.rtf), a HTML file (.htm, .html) or a web link (http://...)

`message_file=`

- the file name or link shown when a user starts PX-Edit
- may be a text file, a RichText file, a HTML file or a web link

`check_valuelength_100={0|1}`

- should PX-Edit warn if any text value is longer than 100 characters

`check_title_semicolons={0|1}`

- should PX-Edit warn if any caption keyword contains semicolons

Main settings: [System] /5

`excel_notex={0|1}`

- if set, Excel comments will be moved to *NOTEX*, *VALUENOTEX* or *CELLNOTEX* keywords (instead of *NOTE* keywords)

`ISO_date={0|1}`

- will the dates be presented and saved in ISO format

`unicode_replace_char=_`

- character used when converting to WinANSI for those Unicode characters that cannot be converted

`convert_dashes={0|1}`

- if set, all the different dash characters (e.g. mdash and soft hyphen) will be converted to single dash

Main settings: [System] /6

`list_keyword=`

- defines the limited value list for specified keyword
- the prefix may be either `list_` or `listedit_`
(allows both input field and selection list by double clicking the field)
- the supported table-specific keywords are
 - *AXIS-VERSION* (i.e. `list_AXIS-VERSION=`), *DATABASE*, *DOMAIN*, *INFOFILE*, *MAP*, *MATRIX*, *PX-SERVER*, *SOURCE*, *UNITS* and *VARIABLE-TYPE*

`hint_keyword=`

- description shown in the *Keywords* Tab for the specified keyword
- if the keyword is both table- and variable-specific, the variable-specific description text must be given in format `hint_keyword()=`
(e.g. `hint_NOTE=` and `hint_NOTE()=`)

Main settings: [System] /7

listedit_SUBJECT_AREA=

listedit_SUBJECT_CODE=

- either list_ or listedit_
- these lists work synchronously
- semicolon-separated list items have both code and area information separated with '='
- the *SUBJECT-CODE* list is not actually needed, it will be created using the corresponding *SUBJECT-AREA* list

- Example:

```
listedit_SUBJECT-AREA=Agriculture, Forestry and  
Fishery=MAA;Construction=RAK;...
```

Main settings: [System] /8

`title_dynamic={0|1}`

- whether the *TITLE* keyword will be editable and static or write-protected and dynamic (resembling the PC-Axis behaviour)

`title_variables={0|1}`

- whether variables will be added to the table title when pressing the **Title** button in the *Keywords* Tab or not (depends on `title_dynamic`)

`read_TITLE=`

- the keyword(s) the table title will be copied to
- value may be `CONTENTS` or `DESCRIPTION` or `CONTENTS, DESCRIPTION`

`read_TITLEfirstword=`

- the keyword(s) the first word of the structured file header is read
- possible values: `CONTENTS`, `DESCRIPTION` or `MATRIX`

Main settings: [System] /9

`keyword_table_1=name, type(, format)`

`keyword_variable_1=`

`keyword_value_1=`

- **own** keyword definitions
- *type*: text, numeric, date **or** list
- *format*: multi, *length* or (*list of values*)
- **example**:

`keyword_table_1=Footnote, text, multi`

`keyword_table_2=Birthday, date`

`keyword_table_3=Gender, list(woman, man)`

`keyword_table_4=Information, text, 256`

`keyword_value_1=Level, numeric`

Main settings: [System] /10

`mandatory_keywords=`

- keywords that are considered mandatory in addition to the px standard

`hide_keyword_table=`

`hide_keyword_variable=`

`hide_keyword_value=`

`hide_keyword_cell=`

- keywords that are hidden from the user
- if there is a keyword value, the keyword is shown normally

- Example:

`hide_keyword_table=KEYS, CONFIDENTIAL, COPYRIGHT`

Main settings: [System] /11

`ascii_conversion_type={0|1|2}`

- national character set conversion mode (e.g. in file name conversions)
- options: by letter (0: äöüš > aoush), of one-letter (1: äöüš > aous) or of German style (2: äöüš > aoeueesch)

`ascii_filenames={0|1}`

- warn if file names have characters other than a-z, A-Z, 0-9, - and underline character _ (1) or not

`filename_in_lowercase={0|1}`

- automatically convert output file names to lowercase (1) or not

`domain_in_lowercase={0|1}`

- automatically convert *DOMAIN* contents to lowercase (1) or not

Main settings: [System] /12

`convert_to_xml={xdf|cals|keys}`

- the xml format to be used with the *Edit/Convert to XML* selection

`keys_check={0|1}`

- are the tables pre-checked for a sparse matrix save (1) or not

`rain_save_coloured={0|1}`

- are the charts saved with colours (1) or grey scaled

`timeval_2014={0|1}`

- if `px-web_version` is 2013, the *TIMEVAL* keyword has to be formatted (slightly) against the documentation
- the possible values are 1 (long format with frequency codes) and 0 (standard behaviour)

Main settings: [System] /13

`datanotecells=`

- comma separated list of the text strings that may be used with *DATANOTECCELL* settings
- strings should not include spaces or other special characters used in px files (such as quotes)
- leading or trailing spaces are approved
- the list is needed for reading structural tables when the *DATANOTECCELL* strings are given with the corresponding figures
- strings may be enclosed with quotes

`datanote_parentheses={ 0 | 1 }`

- cells enclosed with parentheses, brackets, curly or angle brackets are marked with corresponding *DATANOTECCELL* setting (1) or not

Main settings: [System] /14

separator_attribute=|

separator_cellnote=!

separator_datanote=#

- cell related metadata can be printed in connection with cell data, using the defined separator characters when reading a structured table
- the separators may be set to any permitted character
 - they should not be the same
 - they should not be field separator characters
- strings containing special characters (such as spaces, commas or separators) should be enclosed in quotes

separator_variable=/

- the separator character or string to be used in variable combining for creating new value texts and codes

Main settings: [System] /15

`join_exact_match={0|1}`

- is the *Exact match* -switch in the *Join* window set as default (1) or not

`join_monolingual={0|1}`

- is the *Do not make a multilingual table* -switch in the *Join* window set as default (1) or not

`language_code=`

- the system interface preferred language code
- NB: this setting is not needed for normal installations

`read_entity_reference={0|1}`

- are the html references (of format `&#. . ;` or `&#x. . ;`) converted to the corresponding Unicode characters when reading px or text files (1) or not

Main settings: [System] /16

`sql_database=`

- the name of the database used within SQL macro files
- if set, PX-Edit will show corresponding *simplePXsql* functions in the interface menus

`sql_baseowner=.`

- the *databaseowner* syntax string that is used in the SQL database
- the default is two dots (.), but for example *MySQL* needs this to be set as one dot (.)

`sql_bulksave={0|1}`

- whether the SQL bulk saving is in use (1) or not

Main settings: [System] /17

`sql_timestamp=Y-M-D h:m:00`

- date and timestamp format for used SQL database
- the format consists of characters YMD (year, month and day), characters hm (hour and minute) and other characters which are in the template

`sql_endline=`

- character used at the end of the SQL statements
- the default is empty, but some installations may need for example a semicolon (;)

`skip_decimal_checking={0 | 1}`

- normally PX-Edit tries to simplify the decimal related keywords (0)
- this behaviour may be skipped (1), but some of the possible decimal errors may not be detected

Main settings: [System] /18

`skip_multiple_open={0|1}`

- whether PX-Edit warns if the user tries to open multiple sessions (0) or not (1)

`remove_default_settings={0|1}`

- whether the default keyword expressions are to be removed from the table metadata (1) or not (0)
- the following keywords with value `NO` would be removed: *AUTOPEN*, *COPYRIGHT*, *DAYADJ*, *DESCRIPTIONDEFAULT*, *DOUBLECOLUMN* and *SEASADJ*, as well as `YES` for *AGGREGALLOWED*

`remove_keywords=`

- a comma-separated list of the keywords that will be removed from the table (e.g. non-used or obsolete keywords)
- use with caution!

Main settings: [Misc] /1

`file_warnsize=10`

- warning trigger size (MB) when opening a px file

`htm_warnsize=1024 128`

- warning table limit (rows x columns) for HTML output

`table_warnsize=50000000`

- warning trigger size (number of figures) when closing a table

`xml_warnsize=1024 128`

- warning table limit (rows x columns) for XML output

Main settings: [Misc] /2

`allow_duplicates={0|1}`

- may the user use and save duplicated value texts or codes (1) or not

`anchor_input={0|1}` [*Settings/Anchor input*]

- do the *Keyword* popup edit boxes remember their previous position (1) or not

`warn_own_lists={0|1}`

- does PX-Edit warn when the values differ from the own value lists (1) or not

Main settings: [Misc] /3

`use_dotcodesum={0|1}` [*Settings/Dot code sum*]

- use the dot code sum value (1) or not in calculations

`user_log={0|1}`

- whether a user-specific error and warning log is in use (1) or not
- the user log file is in the same directory as the personal ini file
- if there is `ini_directory` setting, the name will be `username_yyyy-mm.log`, otherwise `px-edit_yyyy-mm.log`

`user_level={1|2|3}` [*Settings/User level*]

- the current user level: basic (1), advanced (2) or expert (3)

Main settings: [Misc] /4

`fill_item=..` [*Settings/Fill item*]

- the default *Fill Item*

`dash_replace=..` [*Settings/Replace dash*]

- value used to replace a dash in the input file or Excel table

`keys_fill={0|1}` [*Settings/Sparse matrix fill*]

- will the current *Fill Item* be used when decompressing sparse matrices (1) opposing the standard px behaviour or not

`join_metacopy={0|1|2}`

- the default setting for copying the metadata in table joining: all metadata (2), only the missing metadata (1) or just the needed metadata (0)

Main settings: [Misc] /5

`all_headers={0|1}` [*Settings/Headers*]

- whether all (1) or hierarchical headers are shown in the table

`text_headers={0|1|2}` [*Settings/Headers*]

- value header setting: either texts (1), codes (0) or both (2)

`colour_codes={0|1}`

- use background colours in the table fields or not (0)

`rain_save_coloured={0|1}`

- are the charts saved in colours or using shades of grey (0)

`hide_valueless_keywords={0|1}`

- hide the non-mandatory empty keywords (1) or not

Main settings: [Misc] /6

filename_length=**50**

- the warning length of file name length

filename_in_lowercase={ **0** | 1 } [*Settings/Lowercase filenames*]

- are the output file names converted to lowercase (1) or not

keep_filedate={ **0** | 1 } [*Settings/Keep file date*]

- do not change the file update timestamp when saving (1) or not

sql_saving={ **0** | 1 | 2 | 3 } [*Settings/SQL saving*]

- the preferred *simplePXsql* saving format: meta part only (1), data part only (2), both meta and data part (0) or data part in csv format (3)

Main settings: [Misc] /7

`adjust_decimals={0|1}` [*Settings/Decimal precision*]

- format the output files according to *DECIMALS* (0) or *SHOWDECIMALS* and *PRECISION* keywords (1), does not affect px, xdf or xml/keys, though

`cals_decimal_separator={.|,}` [*Settings/XML/Cals saving*]

- the decimal separator for xml/cals output

`cals_thousand_separator={0|1|2|3}` [*Settings/XML/Cals saving*]

- the thousand separator for xml/cals output: either none (0), space (1), comma (or period, depends on decimal separator) (2) or quote (3)

`unicode_saving={0|1}` [*Settings/Save in Unicode*]

- is the Unicode option the first (1) or not in the saving alternatives

`unicode_select={0|1}`

- is the Unicode format the default for Meta part window (1) or not

Main settings: [Misc] /8

cellcomments={0 | 1} [*Settings/Cellnotes*]

- are the Excel cell comments copied as px keywords and vice versa or not (0)

column_widths={0 | 1} [*Settings/Column widths*]

- are the table columns automatically adjusted or not (0)

show_notex={0 | 1} [*Settings/Show the mandatory footnotes*]

- are the mandatory footnotes (*NOTEX*, *VALUENOTEX* or *CELLNOTEX*) shown in a separate window (1) or not

footnotes={0 | 1} [*Settings/Footnotes*]

- are the footnotes included in the Excel output (1) or not

Main settings: [Defaults]

CHARSET=ANSI

SOURCE[en]=Statistics Finland

COPYRIGHT=YES

...

- table-specific keyword settings
- used when the keyword fields are empty and the **Defaults** button is pressed in the *Keywords* Tab

hourminute=09:00

- additionally the update timestamp may be given as hh:mm
- if the value is set as 25:00, the timestamps will not contain hour and minute part (missing them is not regarded as an error)

Main settings: [Constants]

1=€/FIM=5.94573

2=€/BEF=40.3399

3=€/DEM=1.95583

4=€/ESP=166.386

5=€/FRF=6.55957

...

- constant values used in the *Calculator* input fields
- the format:
consecutive integer=Name=numeric value

Main settings: [Dot_codes]

dot1=.

dot2=..

dot3=...

dot4=....

dot5=.....

dot6=.....

dotsum=.....

dotnil=-

- the replacements for the standard dot codes
- will be accepted as valid dot codes during table input
- the internal code will always stay intact
- the settings will be overridden by the corresponding *DATASYMBOL* keywords

Main settings: [XDF]

first_name=

surname=

email=

- placeholders for personal CoSSI/XML settings
- organisational settings are stored in the XDF_32.ini file

Language coding settings: [Language_codes] /1

languages_main=

- the most often needed language codes in comma-separated list
- the list may contain the language names, e.g.

languages_main=fi suomi,sv ruotsi,en englanti
works nicely in Statistics Finland

languages_usual=

- list of the languages which are used every now and then

languages_occasional=

languages_rare=

- list of other, perhaps unused, languages
- these two groups need not be edited

Language coding settings: [Language_codes] /2

`long_language_codes=`

- if the long language codes (e.g. bs-Latn-ba, Bosnian Latin) are needed, this setting adds them to the lists
- adding long language codes in `languages_main` list works as well

`set_default_codepage={0|1}`

- will the *CODEPAGE* keyword be set according to the main language or not (0)

Personal settings: PX-Edit_32.ini

- For personalised settings
- Overrides the system settings
 - changed settings will be saved when closing the session
- The description of the other saved information can be found in the file `PX-Edit_main_32e_ini.txt`
- The user may change the settings manually or delete the file (in which case the `ini_default` setting will be used)
- Located either in the Windows system directory or in the directory defined with the `ini_directory` setting
 - in the latter case, the file name will be `username.ini`

CoSSI/XML settings: XDF_32.ini

first_name=, surname=, email=, ...

languages=fi,sv,en

- personal settings and the language codes in use

fi_orcname=Tilastokeskus

fi_orghphone=+358-29-551 1000

fi_orgwww=www.tilastokeskus.fi

...

- organisational settings

doctype_xdf=-//COSSI//DTD STATINFO_XDF 1.0//EN

doctype_cals=-//COSSI//DTD STATINFO_CALS 1.0//EN

doctype_keys=-//COSSI//DTD STATINFO_KEYS 1.0//EN

- the document types for all formats

Language files

Language files: PX-Edit_lng_xx_32.ini

- Language texts for the PX-Edit user interface
- File names are based on language codes
 - e.g. px-edit_lng_sl_32.ini

language=English

- the language name that will be in the *View/Language* menu

foot_baseperiod=Base period

foot_contact=Contact

...

- footnote headers (taken from the PC-Axis pcaxisxx.txt file)

Language files: alphabet

alphabet=0123456789 (AÄÀÁÃ) (aäàáã) Bb (CÇ) (cç) Dd (EÈÉÊË)
(eèéêë) FfGgHh (IÌÍÎÏ) (iìíîï) JjKkLlMm (NÑ) (nñ) (OÖÒÓÔ) (oöòóô) Pp
QqRr (SŠ) (sšß) Tt (UÜÙÚÛ) (uüùúû) VvWwXx (YÝ) (yýÿ) (ZŽ) (zž)

- used for alphabetical sorting
- may be different in every language
 - e.g. Ä is treated differently in English, German or Finnish
- in the example above:
 - A and Ä come before a (and B, ..)
 - A comes before Ä
- NB: space always comes first

Language files: help

helpfile=**PX-Edit_en.rtf**

- English PX-Edit help file
- located in the startup directory

infofile=**PC-Axis_en.rtf**

- English PC-Axis help file

feedback=**www.stat.fi/comment**

- PX-Edit feedback site

Language files: language strings

```
main_menu_file=File
```

```
main_menu_file_new=New..>>Ctrl+N;create a new PC-Axis table
```

```
...
```

- the language strings are denoted by *meta_key=string* pairs
- several files can be used for the same language when needed
 - the figures 0 to 9 can be used after the language code
- all language files should have the same meta keys

Language files: special notations

- The following special notation strings can be used:

`;` separates a control name and its hint text

`&` precedes a character to be underlined

`^` indicates the shortcut **Alt**+*character*

`|` separates lists

`#` separates lines

`>>` will be replaced with the tab character

`<<` joins a line with the preceding line

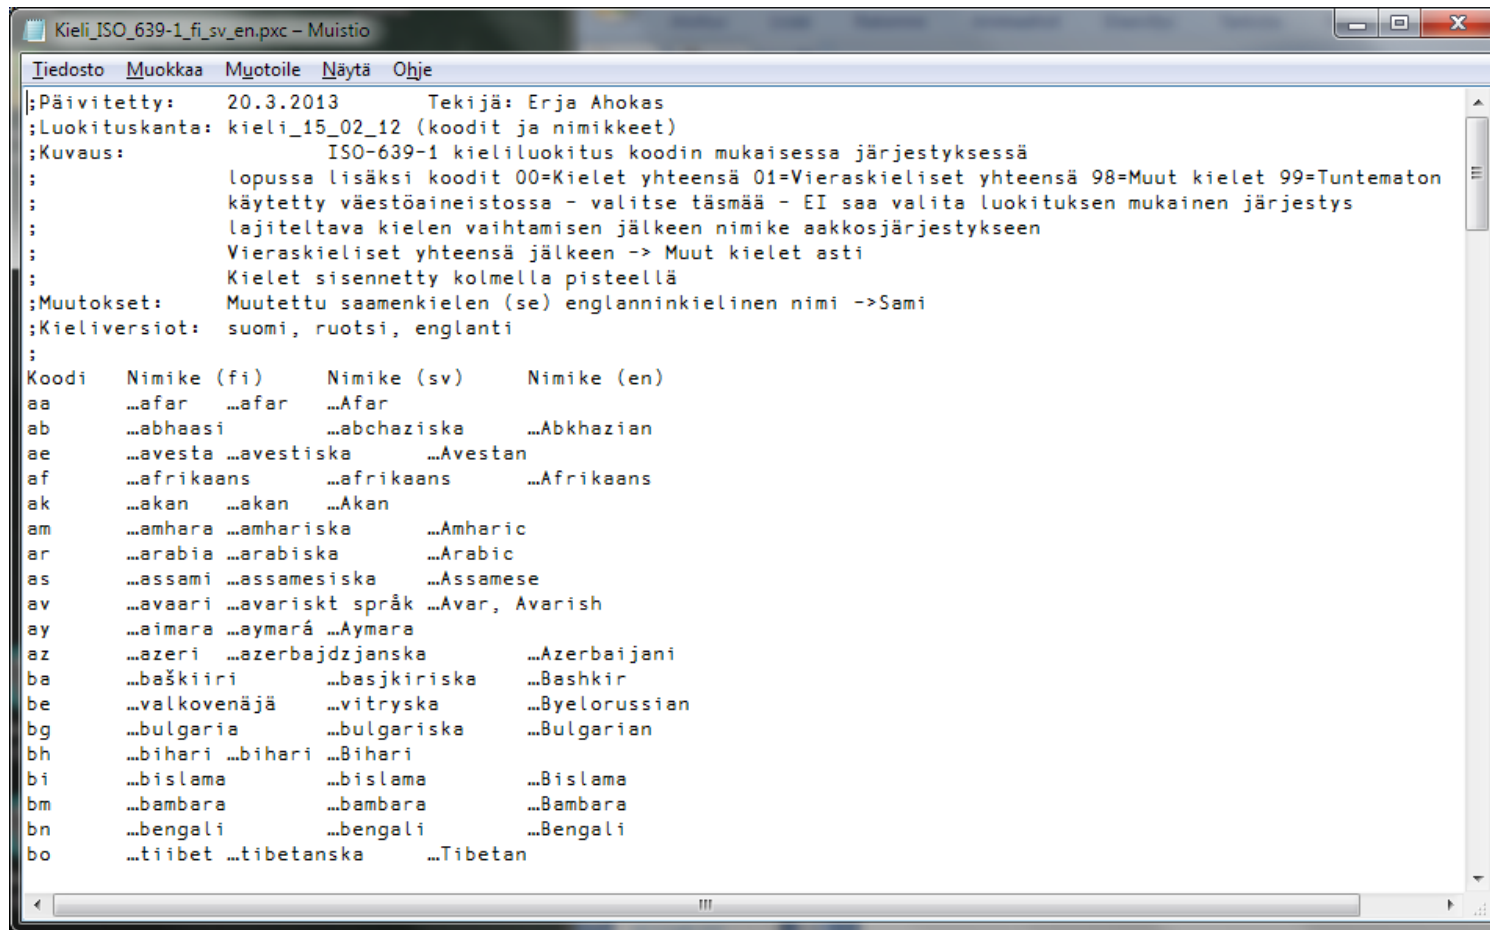

`%1, %2, . . .` will be replaced with a parameter (file or table names, etc.)

Other PX-Edit files

Classification files (.pxc)

- The file consists of records (lines) delimited by tabs
- The first line contains column titles
- The first column contains the codes (no title needed)
 - the following columns optionally contain the different versions
- Comment lines are allowed
 - they begin with a semicolon (;)

Example classification file

```

```

Formula file: PX-Edit_calc.ini

- A normal ini file
 - formula names = `section names`
- Saved formula elements are:
 - constants
 - functions
 - aggregations
 - dot code behaviour and division
 - selections (all or any)

Example formula file:

A screenshot of a text editor window titled "px-edit_calc.ini - Muistio". The window has a menu bar with "Tiedosto", "Muokkaa", "Muotoile", "Näytä", and "Ohje". The text content is as follows:

```
[Percentage]
comment=100 x items / sum of items
left_value=100
left_function=x
left_list=ALL
middle_function=/
right_list=ALL
right_agg=MIN
dots_eq_zero=0
div_by_zero=1
```

PX-Edit application updates

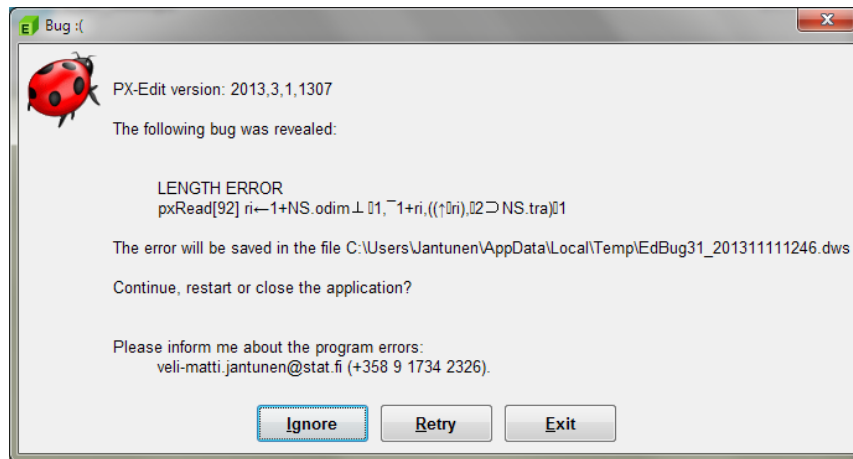

- The application code has been divided into three parts:
 - `PX-Edit.exe` core + loader
 - `dyalog140rt_unicode.dll` interpreter
 - `PX_Edit_32.paq` application package
- Replacing the `paq` file is enough if there is no need to replace the executable or dll
 - can be done when there are users logged in
 - other application files (e.g. language files) may also be replaced

Update warning: `px-edit.update`

- Copying a new `PX-Edit.exe` or `dyalog140rt_unicode.dll` is not possible if there are users keeping the application open
- PX-Edit watches the system directory for the file `px-edit.update`
 - if this file exists, users are warned (within a minute) with this message
 - users will see the standard message if the file is empty
 - the message will pop up until the user logs off (or the file is removed)

Programming error: dump files

- This is the programmer's fault ☹
 - an error dump file will be saved in the log (or temp) directory as `EdBug32_timestamp.dws`
- The **Ignore** button is meant only for saving work in process (if possible)
- Recommendation:
 - save with a different name,
 - close PX-Edit,
 - report the bug (with the `dws` file)
