

Dwellings and Housing Conditions

2019, overview

Rental living of families and persons living alone has become more common

The prolonged growth in the number of household-dwelling units has particularly increased the numbers of household-dwelling units living in rented dwellings. According to Statistics Finland, rental living of persons living alone and household-dwelling units with at least three persons has become more common over the past ten years. Of people living alone, 49 per cent lived in rented dwellings at the end of 2019. Ten years earlier, 44 per cent of those living alone lived in rented dwellings.

Share of household-dwelling units living in rented dwellings by number of persons in 2009 and 2019 (%)

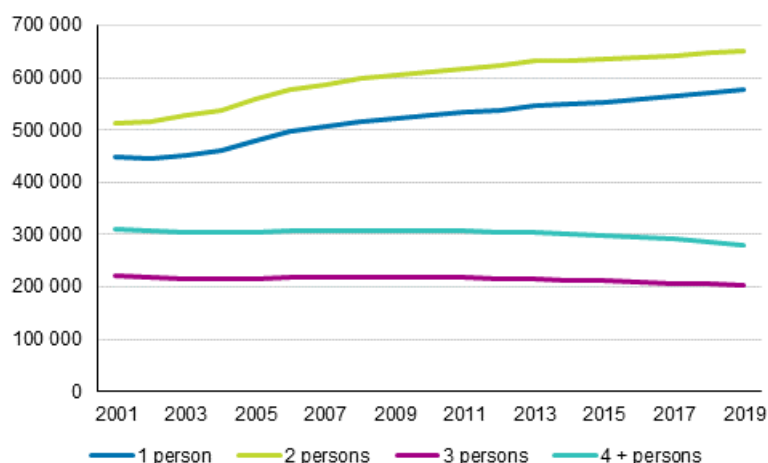

In ten years, the number of household-dwelling units has grown by around 217,000 and at the same time, living in rented dwellings has become more common. In 2019, the share of renting household-dwelling units in all household-dwelling units was 34 per cent, while 30 per cent of all household-dwelling units lived in rented dwellings in 2009. Rental living has become more common particularly among persons living alone and household-dwelling units with at least three persons. Of people living alone, 49 per cent lived in rented dwellings at the end of 2019, the figure being 44 per cent ten years ago. In three-person household-dwelling units the share of those living in rented dwellings was 1.3 percentage points higher in 2019 than ten years earlier. In household-dwelling units with at least four persons, living in rented

dwellings has increased by two percentage points in ten years. In two-person household-dwelling units the relative share of rented living has remained unchanged.

Rental living has increased particularly in urban municipalities, where around 39 per cent of household-dwelling units lived in rented dwellings in 2019. In ten years, the share of renting household-dwelling units has risen by around four percentage points in urban municipalities. There is no significant change in the relative share of rental living in rural and semi-urban municipalities. In rural municipalities, around 18 per cent lived in rented dwellings and in semi-urban municipalities 21 per cent.

The number of household-dwelling units living in rented dwellings has increased in ten years by around 160,000, and about 88 per cent of this comes from the growth of those living alone in rented dwellings. Over the same period, the number of household-dwelling units living in owner-occupied dwellings has grown by around 58,000. The number of owner-occupiers has grown in one and two-person household-dwelling units, which is 99,000 household-dwelling units more than in 2009. The number of larger household-dwelling units has fallen, as the number of household-dwelling units with at least three persons living in owner-occupied dwellings is 42,000 lower than in 2009. The changes are partly explained by an increase in the number of one-person and two-person household-dwelling units and by a decrease in the number of large household-dwelling units and families.

1. Dwelling stock 2019

3 million dwellings

At the end of 2019, there were 3,076,000 dwellings in Finland, of which 341,000 were without permanent occupants. The dwelling stock went up by 33,000 dwellings from the previous year. From 1990, the building stock has increased by 882,000 dwellings, or by about 30,000 dwellings per year. Compared to 1990, 184,000 more dwellings were without permanent occupants. The growth in the building stock has been slowing down from the preceding decade. Most dwellings have been built in the 1970s- and 1980`s. Residential building construction has centred in urban municipalities. In all, 80 per cent of the dwellings completed in the 1995 to 2019 period are located in urban areas.

47 per cent of all dwellings are in blocks of flats

As recently as 1990, the numbers of dwellings in detached houses and blocks of flats were still almost equal. At that time, dwellings in blocks of flats numbered 939,000 and those in detached houses only 4,000 fewer. The share of dwellings in blocks of flats grew over the 1990s, however. At the end of 2019, 47 per cent of all dwellings were in blocks of flats, i.e. 1,443,000 which is 277,000 more dwellings in blocks of flats than in detached houses. The number of terraced houses has grown over tenfold since 1970. In 1970 they numbered only 30,000 but the figure had gone up to 415,000 by the end of 2019.

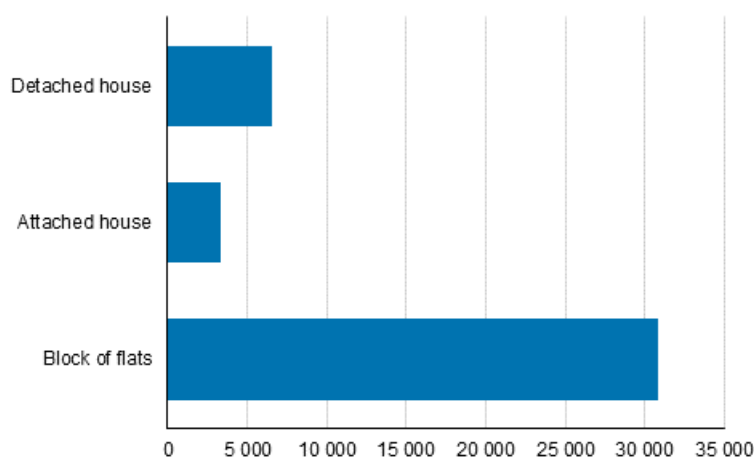

The number of blocks of flats with no lift relatively high

Since 2005 lift has been mandatory in new blocks of flats that have three storeys or more. Between 1995 and 2004 lift was mandatory in new blocks of flats that have four storeys or more. The number of blocks of flats with more than three storeys was around 26,000, of which 2,300 had no lift. Dwellings in blocks of flats with more than three storeys and no lift numbered 68,000 and had 92,000 occupants, of whom 15,000 were aged over 65. It was even less usual to have a lift in a three-storey building. 23 per cent of the 357,000 dwellings in buildings with three storeys were in blocks of flats with a lift. In all, 369,000 Finns, of whom 76,000 were aged over 65, lived in three-storey buildings with no lift.

40,800 dwellings were completed in 2019

In 2019, a total of 40,800 dwellings were completed, of which 6,600 were in detached houses, 3,300 in terraced houses and 30,800 in blocks of flats. Approximately 14,500 new dwellings were completed in Greater Helsinki, 12,700 of them in blocks of flats. 58 per cent of new dwellings in blocks of flats were rented dwellings at the end of 2019.

Figure 1. Dwellings completed in 2019, number

New blocks of flats completed in 2019 had over 15,600 rented dwellings. Around 3,700 of these were interest-subsidised rented dwellings supported by the state. Government-subsidised rented dwellings do not here include rented dwellings with short-term interest subsidy loans, or of the so-called interim model.

Average floor area of dwellings varies a lot

In 2019 the average floor area of a dwelling was 79.3 square metres. The average floor area of the dwelling stock has grown by about 20 square metres since 1970. The average floor area of a one-room unit was 34 square metres, that of a two-room unit 54 square metres, and that of a three-room unit and a kitchen 79 square metres. Despite the growth in the average size of dwellings, there were about 140,000 dwellings of under 30 square metres. In contrast, only 26 per cent of dwellings have a floor area of over 100 square metres. There are 473,000 one-room units with a kitchen or kitchenette, i.e. 15 per cent of the dwelling stock. The most common type of dwelling is a two-room unit. There are 925,000 two-room units with a kitchen or kitchenette, i.e. 30 per cent of the dwelling stock.

Table 1. Floor area per dwelling (m²) by type of building in 1970–2019

Year	Type of building				
	Total	Detached houses	Attached houses	Blocks of flats	Other buildings
1970	60,0	66,0	73,0	51,0	54,0
1980	69,3	83,6	71,7	54,8	55,5
1990	74,4	95,3	70,2	55,8	59,7
2000	76,5	101,9	70,0	56,1	59,8
2010	79,5	108,4	71,2	56,5	60,7
2015	80,0	111,0	71,3	56,4	60,9
2019	79,3	112,3	71,4	55,6	60,3

The average floor area of an owner-occupied dwelling was 97 square metres and most of them are in detached houses. The average floor area of a rental dwelling was 52 square metres and most of them are in blocks of flats. In the dwelling stock statistics the tenure status is mainly defined for permanently occupied dwellings. The tenure status is also defined for a dwelling not permanently occupied when a dwelling is located in a rented dwelling subsidised by the state or a dwelling is temporarily occupied. Of all dwellings, the number of rented dwellings was around 1,008,000 at the end of 2019 and 923,000 of them were permanently occupied dwellings. The number of permanently occupied rented dwellings has grown by 182,000 since 2000.

Number of non-subsidised rented dwellings increased further in 2019

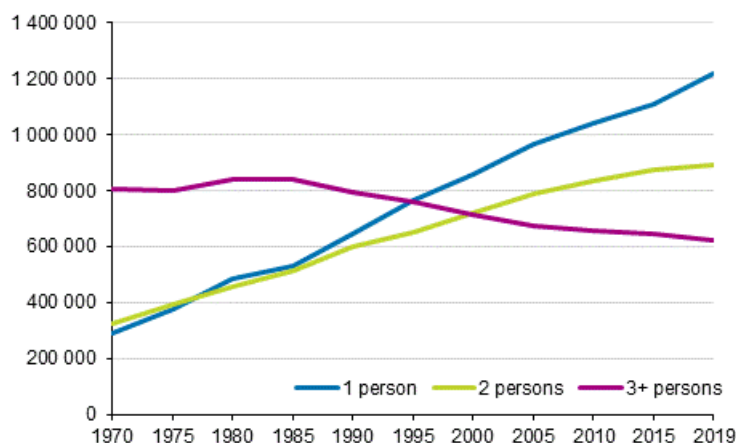

According to Statistics Finland, a total of 40,800 new dwellings were completed in 2019, of which 46 per cent were rented dwellings. Around 14,000 of the completed dwellings were new non-subsidised rented dwellings, which is three times more than interest-subsidised rented dwellings. Of the buildings completed in this decade approximately three times more are non-subsidised rented dwellings than interest-subsidised ones. Thirty-two per cent of these non-subsidised rented dwellings and 44 per cent of interest-subsidised rented dwellings are in Greater Helsinki.

2. Household-dwelling units and housing conditions 2019

Average size of a household-dwelling unit 1.97 persons

The number of household-dwelling units with one and two persons has been growing for several decades, being 77 per cent of all household-dwelling units at the end of 2019. At the end of 2019, the total number of household-dwelling units was 2,734,000, of which 1,221,000, i.e. 45 per cent, were single-person household-dwelling units. In 2019 the average size of a household dwelling unit was first time less than two persons, while in 1970 it was still three persons.

Figure 2. Number of household-dwelling units by size in 1970–2019, number

The size of a household-dwelling unit varied regionally. In urban municipalities the average size of a household-dwelling unit was 1.94 persons and in rural municipalities 2.06 persons. The structure of household-dwelling units differs between rural and urban areas. The share of one-person household-dwelling units is larger in urban areas (46%) than in rural areas (41%).

Around one half of Finns live in detached houses

Around one half of Finns live in detached houses, although only 39 per cent of permanently occupied dwellings are in detached houses. Terraced houses had 370,000 occupied dwellings, that is, 14 per cent of the dwelling stock. Of all occupied dwellings 46 per cent were in blocks of flats, although one third of the population live in blocks of flats. The explanation is that dwellings are smaller in blocks of flats, so smaller families or household-dwelling units live in them than in terraced or detached houses.

Table 2. Household-dwelling units and persons by type of building in 2019

Type of building	Household-dwelling units	%	Persons	%
Buildings total	2 734 219	100	5 399 397	100
Detached and semi-detached houses	1 057 195	38,7	2 621 398	48,5
Attached houses	369 996	13,5	712 623	13,2
Blocks of flats	1 264 420	46,2	1 994 450	36,9
Other buildings	42 608	1,6	70 926	1,3

One household-dwelling unit had around 81 square metres of living area at its disposal, or 41 square metres per person. The floor area per person diminishes considerably as the size of the household-dwelling unit grows. The average area available for a single person living alone was 60 square metres, a two-person

household-dwelling unit had 45 square metres per person but a household-dwelling unit of six persons had no more than 21 square metres of floor area per person.

Table 3. Floor area per person (m2) by size of household-dwelling unit in 1985–2019

Year	Number of persons							
	All household-dwelling units	1 person	2 persons	3 persons	4 persons	5 persons	6 persons	7+ persons
1985	28,9	48,6	34,3	27,6	24,1	21,2	18,7	15,2
1990	31,4	51,8	37,0	29,4	25,0	21,7	19,0	14,8
1995	33,4	54,0	39,2	30,4	25,3	21,9	19,0	15,0
2000	35,3	55,6	40,8	31,4	26,0	22,5	19,4	15,4
2005	37,5	57,0	42,4	32,3	27,3	23,7	20,4	16,3
2010	39,1	58,6	43,6	33,0	28,2	24,4	21,0	16,9
2015	40,1	59,8	44,3	33,4	28,3	24,6	21,0	16,9
2016	40,3	60,0	44,4	33,5	28,3	24,5	21,0	16,8
2017	40,5	59,9	44,6	33,6	28,3	24,5	20,9	16,8
2018	40,8	59,8	44,8	33,6	28,4	24,5	20,8	16,8
2019	41,0	59,8	45,0	33,7	28,4	24,4	20,8	16,8

Almost one in five Finns lives in an overcrowded dwelling

At the end of 2019, the number of household-dwelling units living in overcrowded dwellings was 215,000 and the total number of persons living in such dwellings was 891,000. A household-dwelling unit is defined as living in an overcrowded dwelling if it consists of more than one person per one room of its dwelling, so a person living alone cannot be regarded as living in an overcrowded dwelling. Almost one person in five lived in an overcrowded dwelling. In 2019 the number of overcrowded household-dwelling units has again decreased by around 4,400 and the number of persons living in overcrowded dwellings decreased by around 18,700.

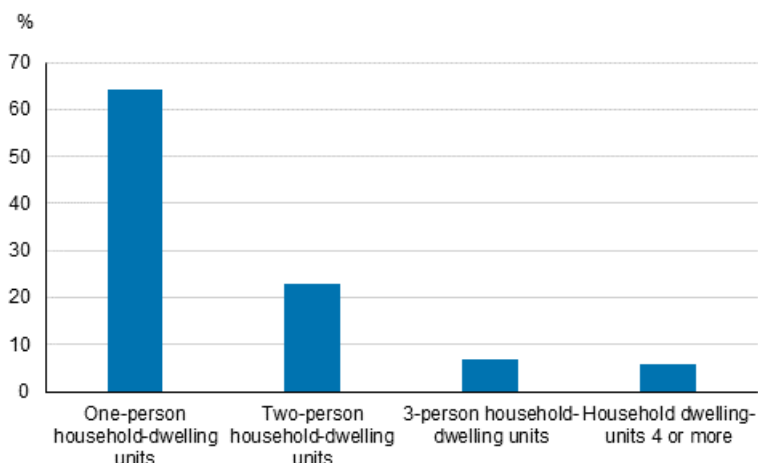

Owner-occupied dwellings have more living space than rented dwellings, when measured by floor area per person. The average floor area per persons of a household-dwelling unit living in an owner-occupied dwelling is 44 square metres, while a unit living in a rented dwelling has only 33 square metres of floor area per person.

Of rental dwellings, non-subsidised rented dwellings had the most floor area per person, 33 square metres. Differences to other rental dwellings were not large. In government-subsidised rented dwellings the floor area was 32 square metres per person. In right-of-occupancy dwellings the living space per person was 33 square metres.

Mainly household-dwelling units of one to two persons in rented dwellings

The majority of those living in rented dwellings, 87 per cent, were living alone or together with another person, while in owner-occupied dwellings the corresponding share was 72 per cent. Six per cent of the household-dwelling units living in rented dwellings and 16 per cent of those living in owner-occupied dwellings were larger household-dwelling units with at least four persons. At the end of 2019, the number of permanently occupied rented dwellings was around 923,000, and 309,000 were government-subsidised or interest-subsidised rented dwellings and 614,000 dwellings were privately financed.

Figure 3. Rented dwellings by size of household-dwelling unit in 2019, (%)

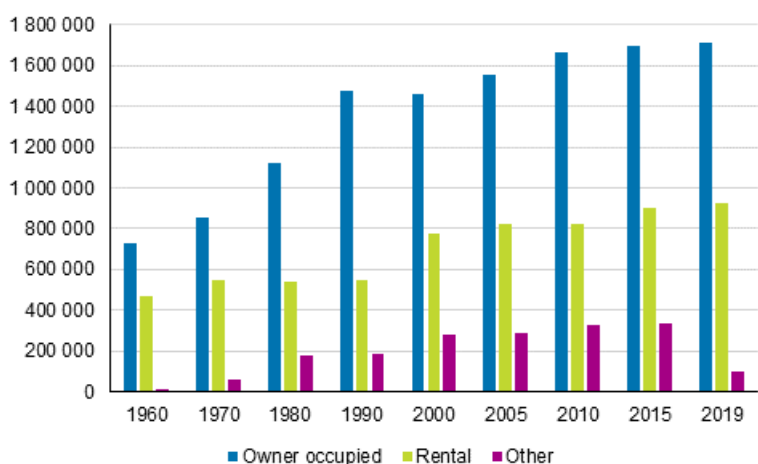

In all, 2,734,000 dwellings were permanently occupied at the end of 2019. Over one half of good one million permanently occupied dwellings in blocks of flats were rented dwellings. Around 120,000 dwellings were rented in terraced houses, being about one third of occupied dwellings in terraced houses. Detached and semi-detached houses had 33,000 rented dwellings.

One quarter of the population live in rented dwellings

The proportion of rented dwellings of all permanently occupied dwellings was 34 per cent, 1.5 million, more than one quarter of the population, lived in rented dwellings. In rented dwellings there are smaller household-dwelling units than in owner-occupied dwellings. At the end of 2019, the total number of permanently occupied rental dwellings was around 923,000, of which 33 per cent were government-subsidised or interest-subsidised rental dwellings. The share of government-subsidised or interest-subsidised rental dwellings of all permanently occupied rental dwellings decreased, as dwellings freed from restrictions. And that is part of the reason why other rental dwellings has increased. At the end of 2019, there were 47,000 right-of-occupancy permanently occupied dwellings in Finland. Forty-six per cent of them are located in Greater Helsinki.

Figure 4. Dwellings by tenure status in 1960–2019

Renting is a tenure status preferred by young household-dwelling units in particular. As the age of the oldest person of a household-dwelling unit goes up the proportion of those living in rented dwellings goes down. In all, 79 per cent of the household-dwelling units with the oldest person aged under 30 and 38 per

cent of those with the oldest persons aged 30 to 44 lived in rented dwellings, while only 23 per cent of the household-dwelling units where the oldest person was aged 45 to 74 did so. The household-dwelling units where the oldest person was aged 45 to 74 were the most likely to own their house. Forty-two per cent of the households-dwelling units meeting this age criterion were owner-occupiers of detached houses. In contrast, when the oldest person in the household-dwelling unit was older than this, owning a house was less likely. The most common mode of dwelling at a later stage in life was an owner-occupied flat in a housing company.

Number of first-time homebuyers 21,500 in 2019

According to Statistics Finland, the household-dwelling population included 21,500 first-time buyers of dwellings in housing companies. The number of first-time homebuyers has fallen by 13,000 persons since 2006. Most first-time homebuyers, 68 per cent, were living in the ten biggest towns of Finland in the year of purchase. Here, a first-time homebuyer refers to a person who has bought a dwelling in a housing company and is exempt from the asset transfer tax as a first-time homebuyer. Those having bought their first home in a real estate property are not included in the statistics. In 2019, the average age of first-time buyers of a dwelling in a housing company was 29,7.

Persons aged 18 to 39 who do not already own a dwelling and who buy the dwelling for their own use are exempt from the asset transfer tax. First-time homebuyers have to move in within six months from the time of purchase, for which reason all first-time homebuyers are not living in the dwelling they own in the statistical reference period. Those registered as permanently resident at institutions, dormitories and abroad, as well as homeless people do not belong to the household-dwelling population.

In Greater Helsinki, 14 per cent of persons aged 20 to 29 were living with their parents in 2019. Outside Greater Helsinki, 16 per cent of persons aged 20 to 29 were living with their parents. This share has fallen by five percentage points from 2005, but it is still higher than in Greater Helsinki.
