

General government debt by quarter

2013, 1st quarter

General government debt grew by EUR 2.1 billion in the first quarter of 2013

General government EDP debt, or consolidated debt at nominal prices, grew by EUR 2.1 billion in the first quarter of 2013 and stood at EUR 105.3 billion at the end of the quarter. These data derive from Statistics Finland's statistics on general government debt by quarter.

General government debt by quarter

During the first quarter, central government debt grew by EUR 1.3 billion and was EUR 95.2 billion at the end of the quarter. The growth came mainly from an increase in the stock of bonds issued by central government. Local government debt, that is, the debt of municipalities and joint municipal boards, rose by EUR 0.6 billion to EUR 14.5 billion by the end of the quarter. Internal general government debt decreased by EUR 0.2 billion during the first quarter.

General government debt by quarter describes general government's debt to other sectors of the national economy and to the rest of the world, and its development is influenced by changes in both unconsolidated debt and internal general government debts. Consolidated general government debt is derived by deducting debts between units recorded under general government from unconsolidated gross debt. For this reason, general government debt is smaller than the combined debts of its sub-sectors.
