

# Index of turnover of construction

2020, May

## Growth in turnover of construction enterprises continued in May

The working day adjusted turnover of construction enterprises grew by 6.5 per cent in May compared to one year before. The volume of sales, from which the impact of prices has been eliminated, increased by 4.2 per cent. Turnover grew strongly in the industries of construction of buildings and civil engineering but decreased in specialised construction activities.

Source: Statistics Finland

Among individual industries, turnover grew most in construction of buildings, where working day adjusted turnover grew by 11.6 per cent and sales volume by 9.2 per cent compared to one year ago. The turnover of civil engineering adjusted for working days increased by 10.6 per cent and sales volume by 20.7 per cent from the previous year. The increase in the sales volume of civil engineering was especially due to fallen costs of civil engineering as a result of cheaper motor fuel oil and bitumen. The working day adjusted

turnover of specialised construction activities decreased by 0.6 per cent and sales volume by 2.8 per cent from one year ago.

The calculation of indices of turnover of construction is based on the Tax Administration’s data on self-assessed taxes, which are supplemented with Statistics Finland’s sales inquiry. The monthly turnover of construction enterprises can have even large variations due to invoicing practices. The final invoice for

major projects may be recorded in the sales of one month, even if the project had required the work of several months or years.

The factors caused by the variation in the number of weekdays are taken into account in adjustment for working days. This means taking into consideration the lengths of months, different weekdays and holidays. In addition, seasonal variation is eliminated from seasonally adjusted series, on account of which it makes sense to compare observations of two successive months as well.

The data for the latest month are preliminary and they may become significantly revised particularly on more detailed industry levels in coming months.
